PROFESSIONAL SUMMARY

Analytical Master of Science in Business Analytics with AI candidate with unique background spanning engineering research, hardware systems optimization, and five years of client-facing technical consulting. Experienced in accelerating operational workflows, streamlining diagnostic data pipelines, and translating dense technical metrics into actionable stakeholder solutions. Seeking to leverage this combination of engineering discipline, systems optimization, and technical consultation to drive data-informed decision-making and business intelligence initiatives within a dynamic organization.

EDUCATION

University of Tennessee

Haslam College of Business - *Master of Science in Business Analytics and Artificial Intelligence*

Tickle College of Engineering - *Bachelor of Science in Aerospace Engineering*

Knoxville, TN

May 2027

December 2021

EXPERIENCE

UNIVERSITY OF TENNESSEE, *Graduate Teaching Assistant*, Knoxville, TN

August 2026 – Present

- Evaluate and grade assignments, lab projects, and exams, providing actionable technical feedback to maintain consistent grading standards and support student mastery.
- Guide students through applied data analysis, coding exercises, and statistical software tools (e.g., R / Python / Excel / JMP) to reinforce theoretical coursework with practical application.
- Collaborate closely with lead faculty to manage course administration, align curriculum objectives, and design rubrics for exams and assignments.

BEST BUY, *Advanced Repair Agent*, Knoxville, TN

August 2021 – June 2026

- Interpreted diagnostic logs, system performance metrics, and hardware test results for 3,000+ clients annually, translating complex technical findings into clear repair recommendations that improved customer understanding to drive informed purchasing and service decisions
- Performed root-cause analysis of hardware and software failures across diverse client devices, identifying underlying issues and implementing corrective solutions while maintaining compliance with data privacy and security standards
- Reduced average ticket resolution time by 60% (4.0 to 1.6 days) through workflow analysis, bottleneck identification, and optimization of hardware diagnostic processes

UNIVERSITY OF TENNESSEE SPACE INSTITUTE, *NanoHELP Intern*, Tullahoma, TN

June 2018 – August 2018

- Collaborated with multidisciplinary research team to evaluate additive manufacturing constraints using experimental test data, ensuring prototype flow plates satisfied operational performance requirements
- Conducted high-fidelity comparative analysis between traditional and additive manufactured flow plate geometries, evaluating pressure drop, current density distribution, and mass transport efficiency
- Processed, cleaned, and validated experimental datasets across multiple prototype iterations, isolating key performance variables and identifying flow inefficiencies that informed subsequent design improvements

OTHER EXPERIENCE

KNOXVILLE-KNOX COUNTY CAC, *Volunteer TechSmart Instructor*, Knoxville, TN

August 2024 – December 2025

- Designed and facilitated technology training sessions, translating complex digital concepts into practical skills that enabled non-technical participants to independently navigate online services and personal devices

SKILLS

Computer: Microsoft Office, SOLIDWORKS CAD, Adobe Photoshop, C++, JavaScript, MATLAB

Analytics & BI: SQL, R, Python (Pandas / Pyomo), Tableau/Power BI, Predictive Modeling, Advanced Excel
